DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. **Claims 1-13, 14, 17-24, and 25**, drawn to a specific method of dynamically assigning a home agent, classified in class 370, subclass 229.
 - II. **Claims 15-16 and 26**, drawn to dynamically assigning an IP address, classified in class 370, subclass 349.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination (Invention II) as claimed does not require the particulars of the subcombination (Invention I) as claimed because Invention II does not require an access request message indicating a request for a mobile IP services and transmitting a home agent address to the home agent. The subcombination has separate utility such as sending and receiving access request messages. In particular, in view of claim 1 as a representative claim for Invention I the comprehensive claim for that group is considered to be claim 5 since it contains similar but different subject matter to claim 16 for group II. For group II, claim 16 of group II is considered to be an evidence claim and not a linking claim since the claims pertain to further clarifying a step of assigning a dynamic IP address. Thus group II has the combination A specific (i.e., the subject matter related to dynamically assigning an IP address) and B broad (i.e., the subject

matter related to selecting a preferred home agent). Group I is considered the subcombination with B specific (i.e., the subject matter related to specifically selecting a home agent using the limitations recited for claim 1). Thus the combination claim A B broad is an evidence claim which indicates that the combination does not rely upon the specific details of the subcombination for its patentability, see MPEP 806.05(c) III.

2. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

4. A telephone call was made to Gregory W. Carr on 9/20/2005 to request an oral election to the above restriction requirement, but did not result in an election being made. In particular, applicant requested a restriction in writing.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
